

# Chainsaw

## Basic

A chainsaw can be a very dangerous piece of machinery when used casually or without proper training. Our experienced trainers will minimize the potential dangers by educating all participants on the correct use handheld chainsaws. The course involves cutting a range of materials with a handheld chainsaw in a variety of domestic and workplace settings including construction sites, sawmills, frame and truss factories and timber retail yards. Ensure your staff are trained effectively when using chainsaws.

## TABMA Training Trainers are Leading Industry Experts with extensive experience in the Industry!

### What you will learn...

- \* Maintenance and servicing requirements of chainsaw powerheads and cutting attachments
- \* Chain sharpening
- \* Cleaning and maintenance after use
- \* Storage procedures
- \* Recording requirements
- \* Operating a chainsaw safely
- \* Safely cutting various materials

-----

*"Out of everything that TABMA Training does it's their commitment to quality outcomes for trainees that has impressed me. I am extremely grateful for their dedication in this area."*

*Bob McMaster*

-----

A nationally recognised statement of attainment of units of competency in a FWPCOT2237 Maintain Chainsaws and FWPCOT2238A Cut Materials with a Handheld Chainsaw will be issued upon successful completion of assessment.
